TORTOISE FENCING

TORTOISE GUARDS

HABITAT PROTECTION SYSTEMS

SECURITY FENCING SYSTEMS

PROTECTION. CONSERVATION. COMPLIANCE.

TORTOISE PROTECTION IS REQUIRED BECAUSE:

- Protected species require habitat preservation measures
- Improper fencing allows tortoise escape or injury
- Environmental regulations require approved systems
- Non-compliance can result in project delays and penalties

NON-COMPLIANT INSTALLS CAN LEAD TO:

- Environmental violations
- Project shutdowns
- Fines and penalties
- Failed inspections
- Liability exposure

TORTOISE FENCING AND GUARD SYSTEMS are critical for preserving protected species while maintaining safe and compliant project sites.

We design and install systems that follow environmental guidelines, industry best practices, and regulatory standards — not shortcuts.

FENCING SPECIALISTS CAPABILITIES INCLUDE:

- Tortoise fencing (temporary & permanent)
- Tortoise guard systems
- Environmental compliance coordination
- Fence line clearing and preparation
- Maintenance and repair services

TORTOISE FENCING INSTALLATION

- Temporary and permanent tortoise fencing is available
- Designed with three strands of smooth wire on top to provide extra security and visibility
- Maintenance and repair services available where applicable

ENVIRONMENTAL COORDINATION

- Installed in coordination with biologists and monitors to ensure a safe and protected environment throughout installation
- Clearing and grubbing of fence line available

TORTOISE FENCING SYSTEMS

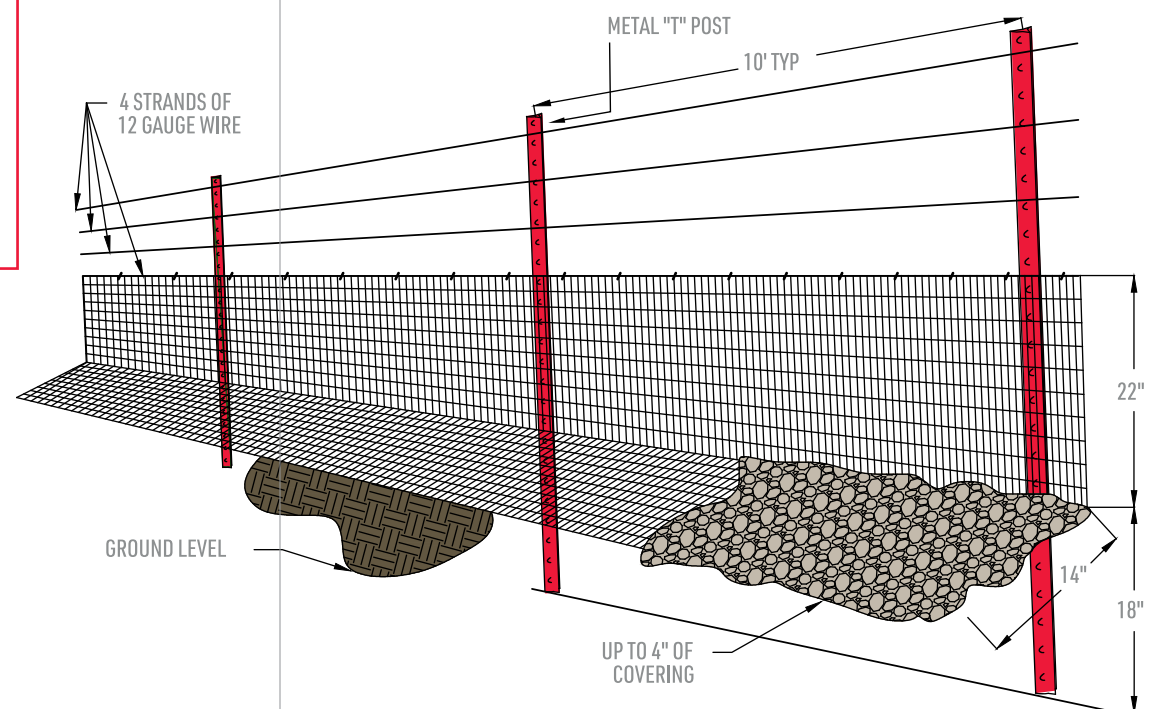

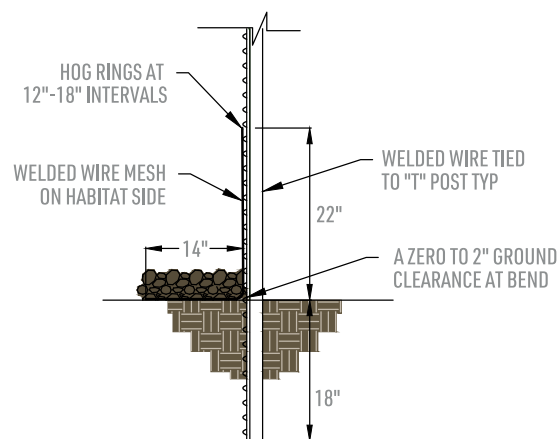

Specializing in tortoise protection and conservation through professionally designed fencing systems that balance environmental safety with site security.

KEY FEATURES FOR TORTOISE FENCING

1. Temporary and permanent tortoise fencing is available
2. Designed with three strands of smooth wire on top to provide extra security and visibility
3. Maintenance and repair services available where applicable
4. Installed in coordination with biologists and monitors to ensure a safe and protected environment
5. Clearing and grubbing of fence line available

NOTES

- Ensure the fence height above ground level is no less than 22 inches
- Ensure there is 0 to 2 inch ground clearance at the base
- Ensure the bottom portion of the fence is lying on the ground, and is pointed in the direction of the desert tortoise habitat
- Cover the portion of the fence that is flush with the ground with cobble (rocks), placed to a vertical thickness of up to 4 inches

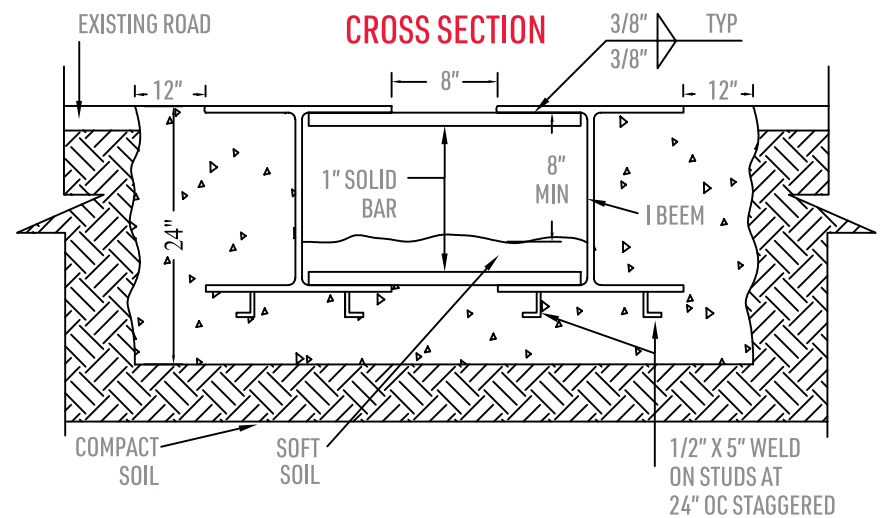

TORTOISE GUARDS

Tortoise guards are designed to safely guide and protect tortoise movement across developed areas.

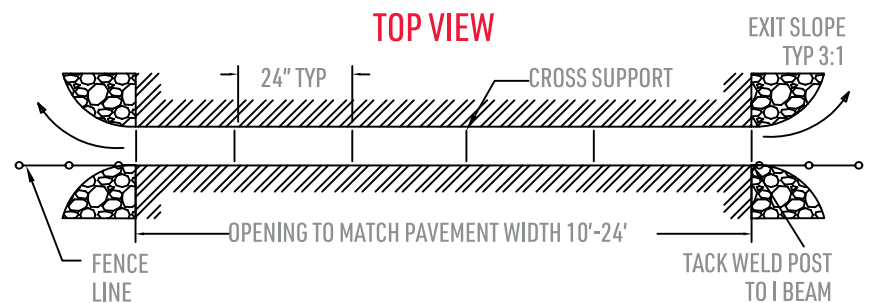

PROVEN PERFORMANCE

- Successfully installed throughout the Moapa Valley
- Designed for durability in harsh desert environments

NOTES

- Beams are connected using solid rod
- Escape ramps must not exceed a 3:1 slope and be oriented in the direction of tortoise travel
- Maintain 2-inch vertical clearance between guard bottom and upper cross support
- Designed to integrate with fence line and surrounding grade conditions

Available options are permanent and temporary guards

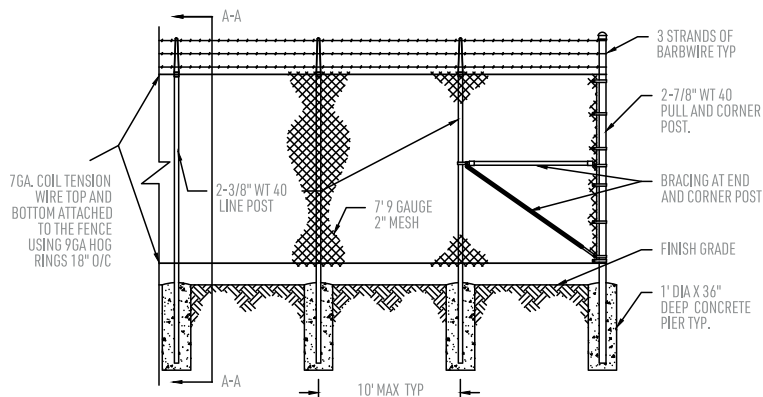

SECURITY FENCING SYSTEMS

Fencing Specialist has been installing security fencing in Nevada for over forty years. We can accommodate requests for most security requirements, including the installation of surveillance systems.

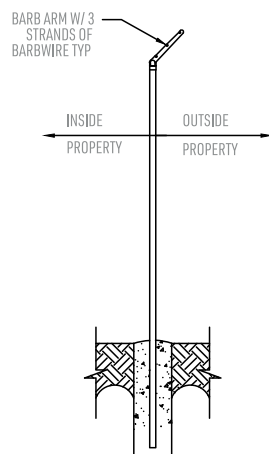

SECURITY FENCING

- All designs can be modified to include gates and access controls.
- We provide installation and maintenance of gate operators.
- We can include grounding of any fence installation.
- Custom fence heights are available.

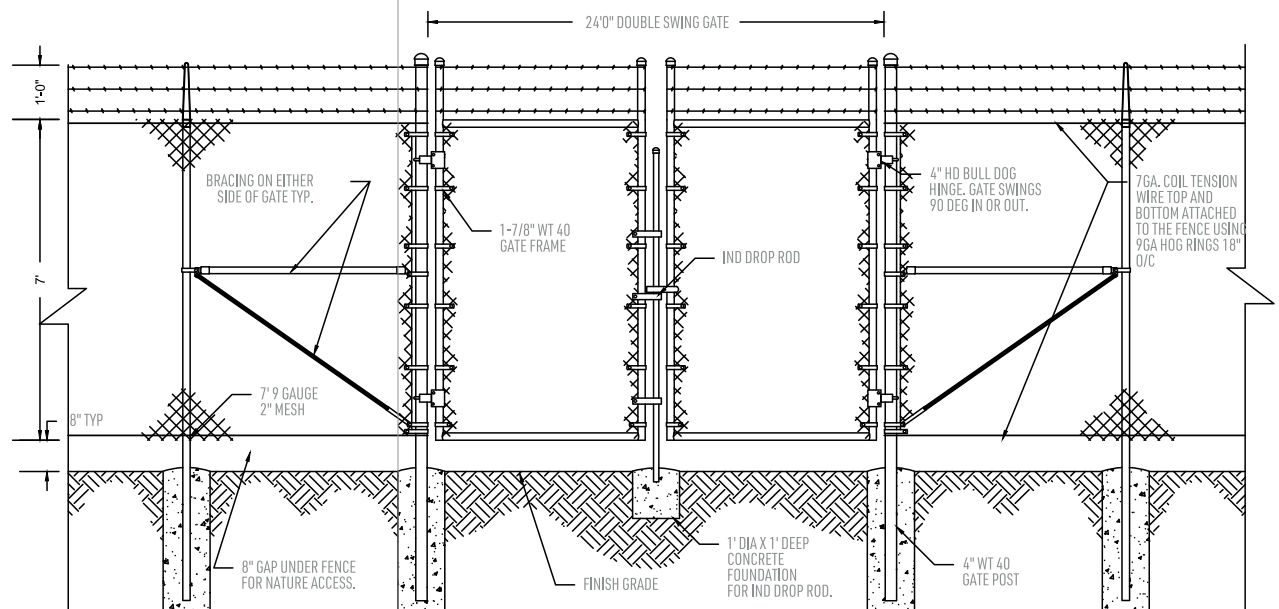

TYP FENCE ELEVATION

A-A SECTION

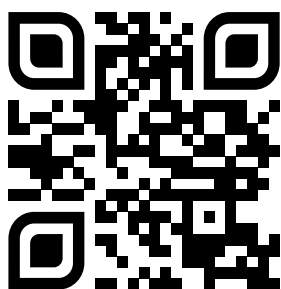

TYP GATE ENTRY

NOTES

- Gates will have hold backs
- The fence will be tied to post
- This detail is not intended for screen or slats
- All hardware/fittings are galvanized after manufacturing
